Title: us-09-676-436-3

Perfect score: 20

Sequence: 1 agggattccagc 20

Searched: 7024 seqs, 81329 residues
Total number of hits satisfying chosen parameters:

IDENTITY_NUC Gapop 10.0 , Gapext 0.5

Scoring table:

Minimum DB seq length: 8 Maximum DB seq length: 50 Post-processing: Minimum Match 0% Maximum Match 100% Listing first 32 summaries

Database : rnpb.seq:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENERAL INFORMATION:
APPLICANT: ZERIA PHARMACEUTICALS CO., LTD.
TITLE OF INVENTION: METHOD OF SCREENING A DRUG FOR TREATMENT OF SQUAMOUS
TITLE OF INVENTION: CELL CARCINOMA
FILE REFERENCE: E6114-01.
CURRENT APPLICATION NUMBER: US/09/953,562
CURRENT FILING DATE: 2003-02-24
PRIOR FLIING DATE: 2001-03-22
NUMBER OF SEQ ID NOS: 27

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 58, A

Patent No. 6083695
GENERAL INCOPARATION:
GAPLICANT: Hardin, Susan H.
APPLICANT: Hardin, Ramin
APPLICANT: Hardin, Paul E.
TITLE OF INVENTION: Gene Sequencing and Method Thereof
APPLICANT: Townes, Tim M.
APPLICANT: Donze, David
TITLE OF INVENTION: DELTA-ERYTHROID KRUPPEL-LIKE FACTORS AND
TITLE OF INVENTION: METHODS OF USE
FILE REFERENCE: 05118.0008U3
CURRENT APPLICATION NUMBER: US/08/874,569B
CURRENT FILING DATE: 1997-06-13
PRIOR FILING DATE: 1996-06-14
NUMBER OF SEQ ID NOS: 21
SOFTWARE: FASLSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  33.0%; Score 6.6; DB 1; Length 21; 69.2%; Pred.
